Double Acting

True Union Body

The Chemline Type 710 Pneumatically Actuated Diaphragm Valve features a plastic piston actuator designed for long cycling life and corrosion resistance. Compared to a 1/2" pneumatically actuated ball valve it is a fraction of the size and cost.

Type 710 is part of the 700 Series of diaphragm valves featuring modular construction which minimizes spare parts requirements. Being a diaphragm valve, it is suitable for sanitary or slurry applications. With a PTFE diaphragm, it has corrosion resistance superior to a ball valve.

features

Pressure rated to 90 psi

- 90 psi at 20°C for all materials

Long Cycling Life

- Valves normally operate well over one million cycles maintenance free⁴

Solid Plastic Body & Actuator

- High strength "Ixef"⁵ plastic actuator
- Lightweight
- Corrosion Resistant

Epoxy Coated Spring Steel Springs

- Spring steel springs have longer life and are stronger than stainless steel springs. Epoxy coating resists corrosive environments.

Safety Spring Cartridge

- Contained spring set allows for safe removal of actuator
- Spring cartridge may be easily reversed to change between Normally Closed and Normally Open functions

Direct Mount Accessories

- Accessories (travel stop, position indicator, manual override, limit switch box) thread into the top of the actuator and are easily installed in the field

*Air connections for all control functions are Rp 1/8 (BSP 1/8") as standard.
Rp 1/4 is available as an option. **Air consumption** for all sizes is 1.65 cubic inches.
